Summary

Backend engineer with 4+ years at Mercedes-Benz R&D India, building Python services and developer infrastructure that support cross-functional teams across 6 global sites. Experienced in taking products end-to-end — from gathering requirements with stakeholders to deploying containerized services on GCP and on-premise environments. Focused on reducing friction for the team through reusable tooling, shared SDKs, and standardized CI/CD.

Technical Skills

Languages: Python, SQL, TypeScript (Pulumi)
Backend: FastAPI, Flask, Django, Kafka, Flyte
Databases: PostgreSQL, MSSQL, MongoDB
Infrastructure: Docker, Kubernetes, GCP, ArgoCD, Pulumi
CI/CD & Quality: GitLab CI, Jenkins, JFrog, Black Duck, Polaris (SAST/SCA)

Professional Experience

- Software Engineer** | Mercedes-Benz R&D India, Bengaluru Jul 2023 – Present
- Built 2 FastAPI microservices (labeling workflow tool + taxonomy manager) on GCP/Kubernetes, enabling external labeling partners and internal teams to manage ADAS recording annotations.
 - Created a centralized GitLab CI/CD catalog with reusable pipeline templates — adopted across 6 repositories by multiple teams, eliminating per-repo boilerplate and enforcing consistent build/test/deploy standards.
 - Developed a Python JWT/SSO SDK to decouple authentication logic from application code; published to JFrog Artifactory for org-wide adoption, reducing integration effort for other backend teams.
 - Designed a Flyte data pipeline that copies ADAS recordings between GCP buckets and triggers downstream metadata APIs — orchestrating 100–200 GB per execution as part of a multi-team data ingestion workflow.
 - Implemented Kafka consumer for asynchronous annotation request processing, decoupling the labeling workflow from synchronous API dependencies.
 - Provisioned GCP artifact registries, service accounts, and IAM roles using Pulumi (TypeScript), enabling repeatable infrastructure setup across 4 deployment environments.
 - Integrated SAST/SCA scanning (Polaris, Black Duck), linting, formatting, and automated tests into all CI/CD pipelines, establishing quality gates adopted as team standard.
- Graduate Engineer Trainee** | Mercedes-Benz R&D India, Bengaluru Aug 2022 – Jun 2023
- Rewrote a legacy Django metadata app in Flask — introduced JSON-template-driven form rendering (12+ templates stored in DB), replacing hardcoded form logic and cutting new form type delivery from days to hours.
 - Deployed and operated the metadata tool on-premise via Docker; served 10 concurrent users across 6 countries for 6–8 hour daily sessions with stable uptime.
 - Built Flask backend for a video playback service that served mp4 drive recordings from mounted storage, with metadata-based filtering to help data collection teams locate relevant recordings.
 - Owned Jenkins CI/CD pipelines for 3 on-premise applications: automated Docker builds, test execution, and deployments — reducing manual deployment errors by 70%.
 - Maintained a ClearML fork (MLOps platform) deployed on-premise, supporting internal ML engineers with bug fixes and operational upkeep.
- Software Engineering Intern** | Mercedes-Benz R&D India, Bengaluru Mar 2022 – Jul 2022
- Built proof-of-concept decentralized auth system for vehicle user profiles using Hyperledger Indy, researching DIDs, Verifiable Credentials, and Zero-Knowledge Proofs.
 - Integrated facial recognition (Python) for profile-based vehicle access control as part of the blockchain identity prototype.

Education

B.Tech in Computer Science Engineering – PES University, Bengaluru 2018 – 2022

Awards

MBRDI X-Stream Award (2026) | Silver Award (2025) | Process Innovation Award (2024) | Departmental Silver Award (2024)
